

NetComms 2 Module 3 Reviewer: Software Development and Design

DevNet Associate, Module 3. Built from DEVASC_Module_3.pdf. Choice and matching only.

Instructions: choose the best answer for every item. Matching items use a dropdown on the real exam, so pick one letter for each term. The answer key is at the end.

Concept Questions (Slide Order)

1. How many phases does the SDLC have in the Module 3 slides?
 - A. Six
 - B. Five
 - C. Seven
 - D. Four

2. Which SDLC phase ends with the Software Requirement Specification (SRS) document?
 - A. Testing
 - B. Requirements and Analysis
 - C. Design
 - D. Implementation

3. Which SDLC phase ends with High-Level Design (HLD) and Low-Level Design (LLD) documents?
 - A. Requirements and Analysis
 - B. Design
 - C. Implementation
 - D. Deployment

4. Which SDLC phase is the longest of the life cycle?
 - A. Maintenance
 - B. Testing
 - C. Implementation
 - D. Design

5. In which SDLC phase does the product manager release the final software to end users?
 - A. Deployment
 - B. Testing
 - C. Implementation
 - D. Maintenance
6. Which SDLC phase includes supporting customers, fixing bugs found in production, and gathering new customer requests?
 - A. Deployment
 - B. Testing
 - C. Design
 - D. Maintenance
7. Each SDLC phase takes its input from what?
 - A. The programming language chosen
 - B. The results of the previous phase
 - C. The next phase
 - D. The customer's budget
8. Which are the three most popular software development methodologies in the module?
 - A. Waterfall, Agile, and Lean
 - B. Waterfall, Scrum, and XP
 - C. Agile, FDD, and XP
 - D. Lean, DSDM, and Crystal
9. The type of methodology to use depends on which factors?
 - A. Programming language only
 - B. Cost of hardware only
 - C. Type of project, length of project, and size of team
 - D. Number of customers only
10. Who created the original waterfall model?
 - A. Roy Fielding
 - B. Winston W. Royce
 - C. Alistair Cockburn
 - D. Erich Gamma

11. How many software developers wrote the Agile Manifesto, and in what year?

- A. 12 developers in 1994
- B. 23 developers in 2020
- C. 17 developers in 2001
- D. 7 developers in 2001

12. How many principles does the Agile Manifesto list?

- A. 4
- B. 7
- C. 23
- D. 12

13. How long is a sprint usually, according to the module?

- A. 6 to 8 weeks
- B. 1 to 2 days
- C. 2 to 4 weeks
- D. Exactly 15 minutes

14. In Agile, what is the backlog?

- A. A time-boxed period of development
- B. A prioritized list of all the features of the software
- C. A list of resolved bugs
- D. A daily stand-up meeting

15. Which template does the module suggest for a user story?

- A. If <condition>, then <action>, else <action>
- B. As a <user|role>, I would like to <action>, so that <value|benefit>
- C. The system shall <requirement>
- D. Given <state>, when <event>, then <result>

16. What is the largest recommended size for a scrum team?

- A. 3 individuals
- B. 15 individuals
- C. 10 individuals
- D. 25 individuals

17. How long should the scrum master's daily stand-up meeting last at most?
- A. 1 hour
 - B. 30 minutes
 - C. 15 minutes
 - D. 5 minutes
18. Which Agile method emphasizes eliminating wasted effort and reducing programmer cognitive load?
- A. Feature-Driven Development
 - B. Scrum
 - C. Extreme Programming
 - D. Lean
19. Which Agile method prescribes development feature by feature from an overall model?
- A. Lean
 - B. Scrum
 - C. Feature-Driven Development (FDD)
 - D. Extreme Programming (XP)
20. Which Lean principle is described as the most fundamental?
- A. Eliminate waste
 - B. Empower the team
 - C. Optimize the whole
 - D. Amplify learning
21. Which is NOT one of the seven wastes of software development in the module?
- A. Refactoring
 - B. Defects
 - C. Partially done work
 - D. Task switching

22. Why does Lean say to decide as late as possible when there is uncertainty?
- A. Decisions should be based on facts rather than opinions or speculation
 - B. To let customers make all decisions
 - C. To avoid ever making decisions
 - D. To reduce the number of sprints
23. Which Lean principle says each person must be allowed to make decisions in their own area of expertise?
- A. Optimize the whole
 - B. Empower the team
 - C. Build integrity in
 - D. Deliver as fast as possible
24. Which Lean principle says software must be built cohesively and not only by each expert's own focus?
- A. Amplify learning
 - B. Empower the team
 - C. Decide as late as possible
 - D. Optimize the whole
25. Who are the Gang of Four (GoF) authors known for?
- A. The REST architectural style
 - B. Lean Software Development
 - C. The Agile Manifesto (2001)
 - D. Design Patterns: Elements of Reusable Object-Oriented Software (1994)
26. Into which three categories did the Gang of Four divide their patterns?
- A. Creational, Structural, Behavioral
 - B. Functional, Non-functional, Integration
 - C. Local, Centralized, Distributed
 - D. Model, View, Controller

27. How many design patterns did the Gang of Four list?

- A. 7
- B. 12
- C. 50
- D. 23

28. The Observer design pattern belongs to which category?

- A. Behavioral
- B. Architectural
- C. Creational
- D. Structural

29. What must the subject in the Observer pattern be able to do?

- A. Poll each observer for changes
- B. Only send data once
- C. Store a list of its observers and add or remove them
- D. Store no data at all

30. Which MVC component is the application's data structure that manages the data, logic, and rules?

- A. Router
- B. Controller
- C. Model
- D. View

31. Which MVC component is the visual representation of the data?

- A. Controller
- B. View
- C. Model
- D. Database

32. What is the benefit of MVC stated in the module?

- A. It removes the need for a database
- B. It replaces version control
- C. It requires only one developer
- D. Each component can be built in parallel

33. Which is NOT a benefit of version control in the module?
- A. Enables collaboration
 - B. Accountability and visibility
 - C. Faster hardware performance
 - D. Work in isolation
34. Which version control type stores the delta between two versions of a file in a simple database?
- A. Local (LVCS)
 - B. Remote (RVCS)
 - C. Centralized (CVCS)
 - D. Distributed (DVCS)
35. In a CVCS, what must an individual do to work on a file?
- A. Merge it with a branch
 - B. Clone the whole repository
 - C. Check out the file to lock it, then check it in when done
 - D. Push it to a peer
36. What is one key difference between Git and other version control systems?
- A. Git works only on Linux
 - B. Git requires a lock before editing
 - C. Git stores only the delta between versions
 - D. Git stores data as snapshots instead of differences
37. Which are the three stages of Git?
- A. Local, remote, forked
 - B. Committed, modified, staged
 - C. Repository, working directory, staging area
 - D. Add, commit, push

38. Git and GitHub: which statement is correct?

- A. Git is a hosting service by Microsoft
- B. GitHub is a distributed version control system
- C. They are the same thing
- D. GitHub is a repository hosting service that implements Git

39. Which command sets the initial global Git settings?

- A. `git clone`
- B. `git status`
- C. `git init`
- D. `git config --global key value`

40. Which four transport protocols does Git support for accessing a repository?

- A. Local, Telnet, Git, HTTPS
- B. Local, SSH, Git, HTTP
- C. SSH, Git, TCP, UDP
- D. FTP, SMTP, SSH, HTTP

41. Which command shows the list of files that differ between the working directory and the parent branch?

- A. `git diff`
- B. `git status`
- C. `git pull`
- D. `git log`

42. What does the `.diff` symbol `@@` indicate?

- A. The next block of information is starting
- B. A file was added or removed
- C. A line was removed
- D. A line was added

43. What does `/dev/null` indicate in a `.diff` file?

- A. The next block is starting
- B. Context lines
- C. A line was added
- D. A file has been added or removed

44. What is a fast-forward merge?

- A. A merge that deletes the source branch
- B. A merge that requires manual edits
- C. A merge where Git applies the source commits to the target automatically without conflicts
- D. A merge from a remote to a local repo only

45. Which command lists all the local branches?

- A. `git merge`
- B. `git checkout -b`
- C. `git branch --list`
- D. `git branch -d`

46. Which is a reason developers write clean code?

- A. It is easier to understand and to test with automated methods
- B. It removes the need for comments
- C. It runs faster on every machine
- D. It avoids needing version control

47. What is the difference between a method and a function?

- A. A method returns nothing; a function returns a value
- B. A method is standalone; a function belongs to an object
- C. A method is associated with an object; a function is standalone
- D. There is no difference

48. How is a module packaged?

- A. As a database
- B. As a single file that is expected to work independently
- C. As a class with private variables
- D. As a folder of scripts

49. What does a return statement do?

- A. Starts a loop
- B. Ends the function and returns control to the caller
- C. Imports a module
- D. Prints to the screen

50. In Python, how are private variables and methods indicated by convention?

- A. An asterisk
- B. The word private
- C. Double trailing underscore
- D. A single leading underscore

51. When does the code review process happen?

- A. After the code changes are complete and tested
- B. During requirements gathering
- C. Only after deployment
- D. Before any code is written

52. Which type of code review is triggered by automatic emails when a check-in is made?

- A. Email pass-around
- B. Formal code review
- C. Change-based
- D. Over-the-shoulder

53. Which type of testing examines usability, performance, security, resiliency, and compliance?

- A. Functional testing
- B. Integration testing
- C. Non-functional testing
- D. Unit testing

54. What is Test-Driven Development (TDD)?

- A. Testing only on the customer's machine
- B. Skipping unit tests
- C. Writing tests after deployment
- D. Writing the tests before writing the application code

55. What is the first step of the TDD cycle?

- A. Write the application code
- B. Deploy the code
- C. Create a new test
- D. Refactor the code

56. Which files does PyTest automatically execute?

- A. Files ending with `_spec.py`
- B. Any file with `.py`
- C. Scripts that start with `test_` or end with `_test.py`
- D. Only files named `main.py`

57. For unittest, what do you subclass?

- A. The Suite class
- B. The pytest module
- C. The built-in TestCase class
- D. The Test class

58. Which are the three most popular standard formats for exchanging information with remote APIs?

- A. XML, JSON, and YAML
- B. JSON, YAML, and INI
- C. HTML, CSS, and JS
- D. CSV, XML, and SQL

59. What is the XML prologue?

- A. A namespace
- B. The first line in an XML file
- C. A comment
- D. The last tag of the document

60. Which statement about JSON is correct?

- A. Whitespace is significant in JSON
- B. JSON is a superset of YAML
- C. JSON does not support any standard way to include comments
- D. JSON supports comments like XML

61. What is YAML in relation to JSON?

- A. The parent of HTML
- B. A superset of JSON designed for easier human readability
- C. A binary version of JSON
- D. A subset of JSON

62. How do YAML files conventionally start and end?

- A. An XML prologue
- B. Curly braces
- C. A hash sign
- D. Three dashes to start, three dots to end

63. What is serializing?

- A. Checking the syntax of a file
- B. Breaking a message into components
- C. Turning internal data structures into formatted character strings, roughly the opposite of parsing
- D. Compressing a response

64. In the Module 3 lab, which command lists the installed packages of a Python virtual environment?

- A. `python3 -m venv`
- B. `pip3 freeze`
- C. `pip3 install`
- D. `pip3 list --all-only`

Scenario Questions

65. Your Scrum team notices that a developer frequently switches between tasks, causing delays. Which of the seven wastes of Lean does this behavior represent?

- A. Task switching
- B. Extra features
- C. Waiting
- D. Motion

66. Your project manager asks the team to decide on the database schema before any user requirements are finalized. Which Lean principle does this decision contradict?
- A. Deliver as fast as possible
 - B. Eliminate waste
 - C. Empower the team
 - D. Decide as late as possible
67. Your team is building a stock-ticker dashboard that must update the displayed prices instantly whenever the price service receives new data. Which design pattern best fits this requirement?
- A. Observer
 - B. Singleton
 - C. Decorator
 - D. Factory Method
68. You are developing a web application with a complex UI. To allow designers to work on the layout while developers implement business logic, which architectural pattern should you apply?
- A. Adapter
 - B. Model-View-Controller (MVC)
 - C. Prototype
 - D. Facade
69. Your company uses a single central server for source code storage, and developers must lock files before editing to avoid conflicts. Which type of version control system are they using?
- A. Hybrid Version Control System
 - B. Distributed Version Control System (DVCS)
 - C. Local Version Control System (LVCS)
 - D. Centralized Version Control System (CVCS)
70. A developer is traveling with intermittent internet access and needs to commit changes locally, then push them later when back online. Which version control model supports this workflow without requiring a lock on the remote repository?
- A. File-based versioning
 - B. Distributed Version Control System (DVCS)
 - C. Centralized Version Control System (CVCS)
 - D. Local Version Control System (LVCS)

71. You have just created a new folder for a project and want to start tracking it with Git. Which command should you run first?
- A. `git commit -m "initial"`
 - B. `git clone <repo>`
 - C. `git add .`
 - D. `git init`
72. While working on a new authentication feature, you create a branch called 'auth-feature' from 'master'. After completing the work, you want to integrate it back into 'master' without losing the commit history. Which Git sequence is most appropriate?
- A. `git checkout auth-feature; git pull origin master`
 - B. `git merge auth-feature while on master`
 - C. `git reset --hard auth-feature`
 - D. `git rebase master onto auth-feature`
73. Your teammate has pushed a set of changes to a remote repository and opened a pull request on GitHub. What is the primary purpose of this pull request?
- A. Notify reviewers and allow discussion before merging
 - B. Automatically merge the changes without review
 - C. Delete the source branch after merging
 - D. Create a new branch on the remote repository
74. You need to see exactly what lines were added, removed, or modified in 'config.yaml' between your current working directory and the last commit. Which Git command provides this information?
- A. `git status`
 - B. `git log`
 - C. `git show`
 - D. `git diff config.yaml`

75. You accidentally added a local configuration file to the staging area but want to keep the file in your working directory while removing it from the next commit. Which command should you use?
- A. `git rm <file>`
 - B. `git rm --cached <file>`
 - C. `git reset <file>`
 - D. `git reset --hard`
76. After manually deleting a source file from the filesystem, you need to record its removal in the repository. Which two-step sequence of commands accomplishes this?
- A. `rm <file>` then `git add <file>`
 - B. `rm <file>` then `git add -u`
 - C. `git rm <file>` then `git commit`
 - D. `git reset <file>` then `git commit`
77. All desired changes have been staged and you want to create a commit with the message "Update login flow". Which command will achieve this?
- A. `git commit -a -m "Update login flow"`
 - B. `git push -m "Update login flow"`
 - C. `git commit -m "Update login flow"`
 - D. `git merge -m "Update login flow"`
78. You try to push your local 'feature' branch to the remote repository, but the remote already contains new commits on that branch. Which command will fail unless you first integrate the remote changes?
- A. `git merge feature`
 - B. `git pull origin feature`
 - C. `git fetch origin`
 - D. `git push origin feature`
79. A teammate has merged changes into the remote 'master' branch. You are on the local 'master' branch and need to incorporate those updates. Which command should you run?
- A. `git fetch origin master`
 - B. `git push origin master`
 - C. `git merge origin/master`
 - D. `git pull origin master`

80. You want to create a new branch called 'ui-improvement' based on the current 'develop' branch and switch to it immediately. Which command correctly does this?
- A. `git checkout -b ui-improvement develop`
 - B. `git branch ui-improvement develop`
 - C. `git checkout develop -b ui-improvement`
 - D. `git switch -c ui-improvement develop`
81. After successfully merging 'ui-improvement' into 'develop', you decide to delete the now-redundant local branch. Which command removes it?
- A. `git delete branch ui-improvement`
 - B. `git branch -D ui-improvement`
 - C. `git branch -d ui-improvement`
 - D. `git rm -b ui-improvement`
82. Two branches, 'featureA' and 'featureB', both modify line 42 of the same file in different ways. When you attempt to merge 'featureB' into 'featureA', what will Git report?
- A. A merge conflict will occur
 - B. Git will silently choose the version from featureA
 - C. A fast-forward merge will be performed automatically
 - D. Git will abort the merge without any message
83. After completing a new feature, you submit the changes to the repository and want a review that focuses only on the modified lines. Which type of code review is most appropriate for this scenario?
- A. Email pass-around
 - B. Change-based code review
 - C. Over-the-shoulder code review
 - D. Formal code review
84. In a Test-Driven Development (TDD) workflow, you have just written a failing unit test. What is the next step you should take?
- A. Run all tests again to confirm the failure
 - B. Deploy the code to production
 - C. Refactor the existing code
 - D. Write application code to make the test pass

85. You open a YAML configuration file and see three dashes (---) on the first line. What does this line signify?
- A. The end of the file
 - B. The beginning of a YAML document
 - C. The start of a comment
 - D. A declaration of a list
86. When parsing a JSON response that contains nested objects, which statement about JSON is true according to the module?
- A. JSON basic data types include numbers, strings, Booleans, and nulls
 - B. JSON allows comments within the file
 - C. Whitespace is significant in JSON
 - D. Keys must be enclosed in single quotes
87. During a code review, a teammate points out inconsistent indentation in a Python script. Which code-review goal does this issue primarily violate?
- A. Using correct formatting
 - B. Providing proper comments and documentation
 - C. Making the code easy to understand
 - D. Ensuring the code is free of bugs
88. You are editing a YAML configuration file and need to add comments. In which location are comments NOT allowed?
- A. Inside a long string literal
 - B. After a key-value pair on the same line
 - C. At the beginning of a line before any content
 - D. On a line by itself preceding a section
89. To force the value 123 to be interpreted as a string rather than a number in a YAML file, which tag should you use?
- A. !!float
 - B. !!int
 - C. !!bool
 - D. !!str

90. A Python script reads a JSON response from a web API using a file object. Which function from the json module correctly parses the file into a Python dictionary?

- A. json.load
- B. json.dump
- C. json.dumps
- D. json.loads

91. You need to write a Python dictionary to a YAML file for application configuration. Which library and function are most appropriate?

- A. xml.etree.ElementTree
- B. json.dump
- C. yaml.dump
- D. yaml.load

92. Your team pushes code to a repository hosted on GitHub. What type of repository is the GitHub repository?

- A. Staging
- B. Local
- C. Forked
- D. Remote

93. To extract specific elements from an XML document in Python, which standard library module should you import?

- A. xml.etree.ElementTree
- B. csv
- C. yaml
- D. json

Matching (Dropdown Style)

94. Match the Agile or Scrum term with its description.

- A. A list of resolved bugs
- B. A prioritized list of all the features for the software
- C. A time-boxed period where working software is developed
- D. Uses stand-up meetings to review progress
- E. A simple statement of what a user needs and why

Story: _____

Scrum team: _____

Sprint: _____

Backlog: _____

95. Match the SDLC phase with its result.

- A. The final software is released to end users
- B. Software Requirement Specification (SRS)
- C. A signed contract
- D. Functional code ready to be tested
- E. High-Level and Low-Level Design documents

Requirements and Analysis: _____

Design: _____

Implementation: _____

Deployment: _____

96. Match the Git command with its purpose.

- A. Updates the local repository with the staged changes
- B. Deletes a branch
- C. Gets an existing repository
- D. Updates the remote repository
- E. Creates a new empty repository (.git directory)
- F. Adds files to the staging area

git init: _____

git clone: _____

git add: _____

git commit: _____

git push: _____

97. Match the .diff symbol with its meaning.

- A. The next block of information is starting
- B. A file has been added or removed
- C. The line has been added
- D. Context lines
- E. The line has been removed

+: _____

-: _____

@@: _____

/dev/null: _____

98. Match the MVC component with its role.

- A. The middleman that takes user input and formats it for the model or view
- B. The visual representation of the data
- C. The application's data structure; manages data, logic, and rules
- D. Stores a list of observers

Model: _____

View: _____

Controller: _____

Answer Key

No.	Answer	Why
1	A. Six	SDLC slide
2	B. Requirements and Analysis	Requirements and Analysis phase
3	B. Design	Design phase
4	C. Implementation	Implementation phase
5	A. Deployment	Deployment phase
6	D. Maintenance	Maintenance phase
7	B. The results of the previous phase	SDLC slide
8	A. Waterfall, Agile, and Lean	Software Development Methodologies
9	C. Type of project, length of project, and size of team	Software Development Methodologies
10	B. Winston W. Royce	Waterfall slide
11	C. 17 developers in 2001	Agile slide
12	D. 12	Agile slide
13	C. 2 to 4 weeks	Agile Methods slide
14	B. A prioritized list of all the features of the software	Agile Methods slide
15	B. As a <user role>, I would like to <action>, so that <value benefit>	Agile Methods slide
16	C. 10 individuals	Scrum Teams slide
17	C. 15 minutes	Scrum Teams slide
18	D. Lean	Agile Methods slide
19	C. Feature-Driven Development (FDD)	Agile Methods slide
20	A. Eliminate waste	Lean slide
21	A. Refactoring	Lean: eliminate waste
22	A. Decisions should be based on facts rather than opinions or speculation	Lean slide
23	B. Empower the team	Lean slide
24	D. Optimize the whole	Lean slide
25	D. Design Patterns: Elements of Reusable Object-Oriented Software (1994)	Software Design Patterns
26	A. Creational, Structural, Behavioral	Original Design Patterns
27	D. 23	Original Design Patterns
28	A. Behavioral	Original Design Patterns
29	C. Store a list of its observers and add or remove them	Observer slide
30	C. Model	MVC slide
31	B. View	MVC slide
32	D. Each component can be built in parallel	MVC slide

33	C. Faster hardware performance	Version Control Systems
34	A. Local (LVCS)	Types of Version Control Systems
35	C. Check out the file to lock it, then check it in when done	CVCS slide
36	D. Git stores data as snapshots instead of differences	Git slide
37	C. Repository, working directory, staging area	Git slide
38	D. GitHub is a repository hosting service that implements Git	GitHub slide
39	D. git config --global key value	Setting up Git
40	B. Local, SSH, Git, HTTP	Git clone slide
41	B. git status	Git commands
42	A. The next block of information is starting	.diff Files slide
43	D. A file has been added or removed	.diff Files slide
44	C. A merge where Git applies the source commits to the target automatically without conflicts	Branching Features
45	C. git branch --list	Get a List of all Branches
46	A. It is easier to understand and to test with automated methods	Clean Code slide
47	C. A method is associated with an object; a function is standalone	Methods vs Functions
48	B. As a single file that is expected to work independently	Modules slide
49	B. Ends the function and returns control to the caller	Return Statements
50	D. A single leading underscore	Classes slide
51	A. After the code changes are complete and tested	Code Review slide
52	A. Email pass-around	Types of Code Reviews
53	C. Non-functional testing	Testing slide
54	D. Writing the tests before writing the application code	TDD slide
55	C. Create a new test	TDD slide
56	C. Scripts that start with test_ or end with _test.py	Unit Testing slide
57	C. The built-in TestCase class	Unit Testing slide
58	A. XML, JSON, and YAML	Data Formats
59	B. The first line in an XML file	XML slide
60	C. JSON does not support any standard way to include comments	JSON slide
61	B. A superset of JSON designed for	YAML slide

	easier human readability	
62	D. Three dashes to start, three dots to end	YAML slide
63	C. Turning internal data structures into formatted character strings, roughly the opposite of parsing	Parsing and Serializing
64	B. pip3 freeze	Lab: Explore Python Development Tools
65	A. Task switching	Scenario question; matches the slide wording
66	D. Decide as late as possible	Scenario question; matches the slide wording
67	A. Observer	Scenario question; matches the slide wording
68	B. Model-View-Controller (MVC)	Scenario question; matches the slide wording
69	D. Centralized Version Control System (CVCS)	Scenario question; matches the slide wording
70	B. Distributed Version Control System (DVCS)	Scenario question; matches the slide wording
71	D. git init	Scenario question; matches the slide wording
72	B. git merge auth-feature while on master	Scenario question; matches the slide wording
73	A. Notify reviewers and allow discussion before merging	Scenario question; matches the slide wording
74	D. git diff config.yaml	Scenario question; matches the slide wording
75	B. git rm --cached <file>	Scenario question; matches the slide wording
76	A. rm <file> then git add <file>	Scenario question; matches the slide wording
77	C. git commit -m "Update login flow"	Scenario question; matches the slide wording
78	D. git push origin feature	Scenario question; matches the slide wording
79	D. git pull origin master	Scenario question; matches the slide wording
80	A. git checkout -b ui-improvement develop	Scenario question; matches the slide wording
81	C. git branch -d ui-improvement	Scenario question; matches the slide wording
82	A. A merge conflict will occur	Scenario question; matches the slide wording
83	B. Change-based code review	Scenario question; matches the slide wording
